

Supplementary Figure 1.

Supplementary Figure 1 (A) Two-dimensional echocardiography apical four chamber view demonstrating severely impaired left ventricular systolic function with left ventricular ejection fraction of 29%, global left ventricular hypokinesis, impaired right ventricular systolic function, and a small pericardial effusion. (B) Two-dimensional echocardiography subcostal view better demonstrated the small pericardial effusion with no evidence of increased intrapericardial pressure.

Supplementary Figure 2. (A) CD3 immunostaining showing scattered T lymphocytes (B) Showing positive CD163 immunostaining supporting histiocytic infiltration
